Gulf of Mexico Dead Zone (2010)

A portion of the Gulf of Mexico has been referred to as the “dead zone” because of low Dissolved Oxygen levels.

Credit: NOAA http://www.noaanews.noaa.gov/stories2010/20100809_deadzone.html

What causes the “Dead Zone?”

Fueled by nutrient runoff in Mississippi River WS

Nutrients stimulate overgrowth of algae

Algae sinks, decomposes & consumes oxygen supply in bottom waters

Threatens commercial & recreational gulf fisheries (\$2.8 billion industry annually).

Nutrients (such as nitrogen and phosphorus) can come from fertilizers, failing septic systems, water fowl etc.

Federal Water Pollution Control Act was enacted in 1949

Between 1949 and 1969 the Cuyahoga River in Ohio caught fire 10 times

Cleveland State University Library

**To better protect these public assets,
the 1949 Act was amended in 1972**

The Act was amended
again in 1977

1977 became
Clean Water Act
(CWA)

To preserve, protect
and improve the
Nation's water
resources

Regulatory History CWA (1972 – 1987)

Beginning of the National Pollutant Discharge Elimination System (NPDES) permit program

Required NPDES permitting of point-source discharges (primarily industrial and waste water treatment plants).

Did not regulate stormwater (considered a non-point source).

Regulatory History CWA (1987– present)

Water Quality Act (1987) required NPDES permitting of certain stormwater discharges and construction sites

MS4 stormwater discharges considered point discharges the same as industrial and waste water treatment plant discharges.

Some regulations are intended to translate the goals of the Clean Water Act into actions.

Water Quality Standards (WQS)

The Illinois Environmental Protection Agency (IEPA) created a program to comply with the Federal WQS regulations

There are 3 parts to this branch of the regulations

Water Quality Standards (WQS) Part 1

Designated Uses in Illinois

IEPA identified all uses its waters should support

Fish Consumption

Aquatic Life

Primary Contact

Public and Food Processing Water Supply

Secondary Contact

Aesthetic Quality

Indigenous Aquatic Life

Water Quality Standards (WQS) Part 2

Water Quality Criteria

IEPA determined a set of water quality criteria that waters needed to meet based on each of the 7 designated uses. Some criterion are applicable for multiple Designated Uses.

Water Quality Standards (WQS) Part 3 Monitoring

IEPA is required to submit the monitoring results [305(b) report] to USEPA every 2 years. The impaired waters report [303(d) report] and ranking are part of this report.

Water Quality Standards (WQS) Part 3 Monitoring

Total Maximum Daily Load (TMDL) reports are created by IEPA for impaired waters.

The following are pieces of a TMDL report.

Once the report is approved by USEPA, the recommended strategies should be implemented by affected MS4.

What is the status of waters in Lake Villa Township?
